SKILLS

Full Stack Development: MERN Stack, Django + React, REST APIs, Authentication, Database Design, Deployment

Programming Languages: C++, JavaScript, TypeScript, C, PHP, Python

Frameworks: Django, React.js, Next.js, Node.js, Express.js, Laravel

Frontend: HTML, CSS, Bootstrap, Tailwind CSS

Backend: REST API, JWT Auth, OAuth

Databases: MySQL, MongoDB, PostgreSQL

Tools: Git, GitHub, Postman, VS Code, Linux, Cisco Packet Tracer

Soft Skills: Problem-Solving Skills, Team Player, Project Management, Adaptability

INTERNSHIP

Mindstein Software (Remote)

January 2026 – Present

Web Developer (Part-Time)

- The development and optimization of web application modules using technologies such as JavaScript, React.js and other modern front end frameworks, increasing UI performance and responsiveness.
- Building PHP CodeIgniter backend applications with MySQL databases, and managing server hosting through cPanel and OVI cloud panels
- Collaborating with other development teams to create scalable backend API's for use in the development of real world applications, as well as working together to connect frontend components via an API.
- Handling the integration and troubleshooting of RESTful API's to ensure appropriate communication of information between the frontend and backend.
- Implementation of secure authentication and optimised database queries to improve overall reliability of the system were also performed through collaboration with other teams utilizing an agile software development methodology, including code reviews.

Incupad India Pvt. Ltd.

March 2024 – November 2024

Full Stack Developer

- Led the development of a frontend application for an "AI" based consumer chatbot using the React.js front-end framework and Tailwind CSS, to provide a responsive and visually appealing user interface.
- Implementation of firebase authentication and digital Google service entry points into the platform, resulting in enhanced security and a streamlined user experience.
- Developed and implemented the Django RESTful APIs for the front end and back end of the chatbot in order to facilitate communication between the two through the use of standard methods.
- Collaborated with back-end developers, AI engineers and project management to develop and change directions based on the changing technical or functional requirements of the project.
- Assisted in troubleshooting and resolving issues at the production level to improve the performance of the chatbot, increase scalability and increase the overall user satisfaction

Banao Technologies

August 2023 - March 2024

Python Django Developer Intern

- Designed backend modules for high performance using Django and DRF ensuring smooth and secure data transfer.
- Implemented JWT + OAuth (Google Sign-In) authentication improving login successfulness and security of the system.
- Created managed MySQL/PostgreSQL database integrations by using mysqlclient and psycopg2 providing dependable cloud storage.
- Improved backend efficiency by 25% via optimizing queries and securing database configuration, resulting in improved database performance.

PROJECTS

MicroCourses Platform:

September 2025 – October 2025

- A new online learning platform with micro-courses, where progress can be tracked, and users are certified through completion.
- A front-end framework built with React.js and Tailwind CSS; designed to provide an easy-to-use interface.
- RESTful APIs built on Django to serve up course, enrollment, and student data so that we could manage our system more effectively.
- Integrated Firebase to allow for notifications, real-time data feeds, and user authentication.
- Added a certificate generation module so that when a student finished, they would get a completion certificate that could be verified. - Developed logic to suggest personalized courses to users on their learning path.
- Designed an admin panel to make managing courses, instructors, and users as efficient as possible.
- The project was selected to be created during a hackathon at a large company demonstrating teamwork, innovative thinking, and technical know-how.

Tech: Next.js, Django, PostgreSQL, Tailwind CSS, Firebase, REST API, React.js

SPIDER (Scan & Port Inspection: Discovery & Exploitation Report):

November 2024 – February 2025

- I built a platform to provide a web-based cybersecurity service for scanning IP or domain targets, and evaluating how exposed they are on a network.
- I created a backend based on Django that supports three types of components: security checks, scan records/history, and report generation.
- I added asynchronous/background job handling to help long-running scan processes be more responsive.
- I provided a set of digital forensics features, such as associated evidence hashing, chain of custody tracking, and record keeping in the same location as the investigation is processed (for things like during an active investigation).
- I also implemented AI-based uncomplicated explanations to technical findings from scans to help highlight user-friendly results.
- The application allows for secure authentication flows (including login/register), user dashboards, and summaries of scan results.
- There is a structured reporting management component to make it easier to prove compliance and effectively document incidents.
- I focused heavily on making scalable, maintainable and clean application architecture to support future feature expansion.

Tech: Python, Django, Celery, SQLite, HTML, CSS, JavaScript, AI API Integration

GigFlow - Freelance Marketplace Platform

June 2025 – November 2025

- User authentication & persistent sessions
- Real-time gig bidding with Socket.IO notifications
- Dynamic gig filtering and search
- Personal dashboard for project management
- Protected routes and error handling

Tech: Express.js, Node.js, MongoDB, Socket.IO, JWT (OAuth), React, TypeScript, Vite, Tailwind CSS, TanStack React Query
